

DANIEL MOMOH OSINOR

Full-Stack Backend Engineer • AI Systems Engineer

Nigeria | 09068332520 | danielosinor123@gmail.com | github.com/danielosinor123-gif

PROFESSIONAL SUMMARY

Backend engineer focused on AI-powered applications, scalable APIs, and distributed systems, with a track record of designing complete software systems end-to-end — from architecture through deployment. Comfortable across the stack, with particular strength in backend infrastructure, API design, and integrating LLMs into production-inspired tooling. Emphasis on clean code, modularity, maintainability, and performance.

TECHNICAL SKILLS

Languages & Frameworks: Python, TypeScript, JavaScript, FastAPI, Django, React, Next.js

Data & Infrastructure: PostgreSQL, SQLite, Redis, SQLAlchemy, Prisma, REST APIs, WebSockets

AI / Systems: AI/LLM Integration, Authentication, System Design, Software Architecture, Performance Optimization

Tools: Git, Docker-ready workflows, CI-friendly project structures

SELECTED ENGINEERING PROJECTS

Rubrix — *React, FastAPI, Groq (Llama 3.3 70B), SQLite*

- Built an AI-powered rubric evaluation platform to make scoring LLM responses consistent and scalable.
- Implemented rubric generation, automated AI evaluation, and model comparison with modular backend services.
- Added JSON generation/validation with automatic repair, retry logic, and dependency injection for reliability.
- Supported file ingestion (PDF/DOCX/TXT), weight normalization, and export to PDF/CSV/JSON.

Repository: github.com/danielosinor123-gif/Rubrix

LinkForge — *Python, Next.js, PostgreSQL, Redis, Prisma*

- Designed a smart link management platform with URL shortening, QR-code generation, and analytics dashboards.
- Built REST APIs with validation and authentication, backed by PostgreSQL persistence and Redis caching.
- Implemented asynchronous click tracking and a high-speed redirect pipeline for low-latency lookups.

Repository: github.com/danielosinor123-gif/linkforge

TaskFlow — *React, Express, Socket.IO, PostgreSQL, Prisma*

- Developed a collaborative Kanban project management platform with JWT authentication and sprint planning.
- Enabled real-time synchronization via WebSockets, plus drag-and-drop tasks and automation workflows.
- Integrated Git-linked workflows to demonstrate full-stack SaaS architecture and real-time collaboration.

Repository: github.com/danielosinor123-gif/taskflow

EdgeGateway — *Rust, Axum, Redis, WebAssembly*

- Engineered a high-performance API gateway with middleware pipelines, request routing, and rate limiting.
- Explored edge-oriented infrastructure concepts, authentication, and observability at the gateway layer.

Repository: github.com/danielosinor123-gif/edgegateway

BlogEngine — *Next.js, MDX, Tailwind CSS*

- Created a Markdown-first publishing platform supporting MDX, multiple themes, and static rendering.
- Focused on SEO optimization, RSS feeds, syntax highlighting, and maintainable content architecture.

OBJECTIVE

Seeking a backend engineering role — remote or contract — where I can build AI infrastructure, scalable backend services, and distributed systems, while continuing to grow in cloud-native and AI-enabled application development.
